

Omega Optical Filter Set XF95

FILTER SET COMPONENTS

Exciter:	XF1065 (400-510-630TBEX)
Dichroic:	XF2056 (390-510-630TBDR)
Emitter:	XF3069 (460-560-690TBEM)

OTHER INFORMATION

This set is designed to allow simultaneous imaging of DAPI, fluorescein, and Cy5. Please be advised that this set works best with a CCD detector since the emission of Cy5 is too far to the red for the eye to see.
